Warning:

This document was copied as is from the Cocoon 2.1 documentation, but has not yet been fully reviewed or moved to its new home.

1. General tasks for a release

- We have many open [bugs](#) in bugzilla. These must be reviewed and then solved (or declared invalid etc).
- Documentation updates (this area lacks most). Documentation must be happening all the time, and not left until last.
- Checking what to backport. We have components in the latest developer versions, which might find their way into the bugfix version line (2.0.x).
- Ensure that licensing requirements have been met. update jars.xml, ensure proper banner in *.java header, verify the current LICENSE* files, ensure that external components have suitable licensing requirements.
- Everything we forgot...
