This document was copied as is from the Cocoon 2.1 documentation, but has not yet been fully reviewed or moved to its new home.

1. JSPReader

| | |
|-----------|--|
| NAME | jsp |
| WHAT | The JSPReader component is used to serve JSP page output data in a sitemap pipeline. |
| TYPE | Reader, Sitemap Component |
| BLOCK | Jsp |
| CLASS | org.apache.cocoon.reading.JSPReader |
| SINCE | Cocoon 2.0 |
| CACHEABLE | no |

2. Description

The JSPReader forwards requests to a *JSP* engine, and passing the *JSP* response immediatly as is.

3. Usage

The JSPReader is useful iff you want to serve the *JSP* response without any further Cocoon processing steps.

3.1. Sitemap pipeline examples

The following sitemap snippet uses the JSPReader to feed htm requests by *JSP* files.

```
... <map:match pattern="*.htm"> <map:read type="jsp" src="{1}.jsp" mime-type="text/html" />
</map:match> ...
```

3.2. Sitemap component configuration example

```
<map:readers... <map:reader name="jsp" src="org.apache.cocoon.reading.JSPReader"
logger="sitemap.reader.jsp" /> ...
```

3.3. Configuration

The JSP Reader has no configuration options.

3.4. Setup

The JSP Reader has no setup options.

3.5. Effect on Object Model and Sitemap Parameters

4. Bugs/Caveats

The JSP Reader depends on the accessibilty of a JSP engine from within the Cocoon servlet. A *JSP*

must be properly configured for using the JSP Reader.

5. History

12-25-02: created initial version by Bernhard Huber

6. See also

Feeding *JSP* and passing the content into further Cocoon processing the *JSPGenerator* is appropriate for this task.

Moreover setting up a preprocessing *Servlet Filter* would be the most general solution to feeding *JSP* content.
