Table of contents

1 The usual Cocoon Developer profile.....	3
2 Overview.....	3

Warning:

This document was copied as is from the Cocoon 2.1 documentation, but has not yet been fully reviewed or moved to its new home.

1. The usual Cocoon Developer profile

As a Cocoon developer (someone who develops components for Cocoon), you need of course everything you have to know as a Cocoon user. In addition you should have a basic understanding of the following technologies. Again, this knowledge is not specific to Cocoon; it can be used for building web applications with different frameworks as well.

- The Java Language and Application Frameworks
- Java Servlets
- [Avalon Component Framework](#)

2. Overview

Here will soon appear an overview of the developer perspective.

If you are interested in developing real-world web-applications requiring form handling, authentication or even developing your own portal, have a look at the [web application documentation](#).

The actual developer documentation is available from the side-panel.
